Endura Seal^{TR}

Properly designed and constructed parking lot pavement seldom deteriorates under the loading of traffic. Pavement problems are most often caused by surface deterioration from weathering, oxidation and petroleum solvents. Left unprotected, asphalt pavement loses its flexibility and become brittle. This leads to cracking and raveling of the surface. As a new asphalt surface oxidizes, it "grays out". Petroleum distillates from vehicles cause localized pavement failures and give the parking lot a dirty and unkempt appearance.

Enduraseal TR is designed to protect asphalt pavements from surface deterioration and provides an attractive black appearance at an economic price. Enduraseal TR is an ideal preventative maintenance product developed for use by pavement maintenance professionals.

Endura Seal^{TR}

Enduraseal TR is a premium blend of emulsified asphalt, tire rubber and selected mineral fillers developed for commercial and residential use as a long lasting protective coating for asphalt pavement.

Manufactured by:
Missouri Petroleum

1620 Woodson Road, St. Louis, MO 63114

PROTECTION

Enduraseal TR is a cationic emulsified sealer that is formulated with asphalt, recycled tire rubber, select fillers and chemical additives. Enduraseal TR forms an impervious seal against water and provides a wear resistant coating with a rich black luster.

Resists Solvent Action

The rubberized asphalt base in Enduraseal TR bonds to the asphalt pavement providing a protective coating that effectively stalls the penetration of oils and solvents into the surface.

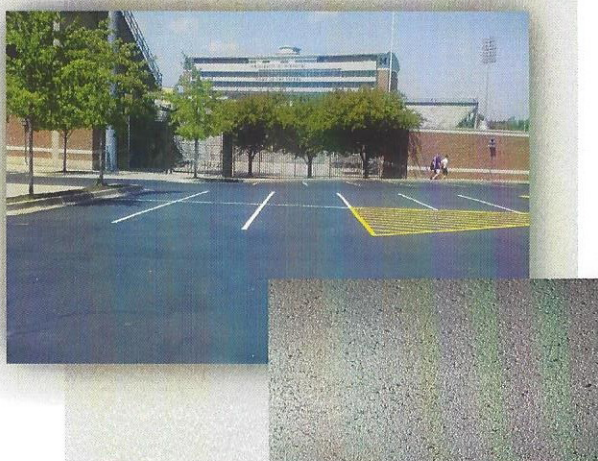

Protects Against Moisture

If the pavement surface is left unprotected, surface moisture can enter the asphalt mix and weaken the underlying base structure. Enduraseal TR helps resist moisture penetration, even during freeze-thaw cycles when structural deterioration is most likely to occur.

Resists Oxidation

Oil penetration and sunlight combine to cause destructive surface oxidation. Enduraseal TR forms a barrier between the pavement and the weather. Our sealer's asphalt rubber base protects the asphalt surface from the effects of oxidation (dry, gray pavement, loose sand and stone, surface cracking and deteriorations).

BEAUTY

Improves Appearance

A clean-looking, black parking lot not only enhances property appearance, but when clearly marked, it facilitates easy, orderly parking. Enduraseal TR dries to a uniform, long-lasting black color and makes gray pavement look like new.

Easy to Clean

Parking areas protected with Enduraseal TR are easier to keep clean. Loose sand and stone usually worn from dry, oxidized pavements are avoided. Enduraseal TR helps fill surface voids, leaving the pavement coated and easy to maintain.

Convenient to Use

Enduraseal TR is applied cold in a smooth, creamy consistency and dries rapidly to provide a tough continuous coating with minimum delay and inconvenience.

ECONOMY

Reduces Maintenance Costs

Using Enduraseal TR in regular maintenance cycles extends the service life of pavement, thus reducing the need for expensive major repairs. Enduraseal TR is a cost effective way to protect your pavement investment. Consider the following costs for various maintenance options:

Enduraseal TR	\$
2" Asphalt Overlay	\$\$\$\$\$\$\$\$
4" Asphalt Reconstruction	\$\$\$\$\$\$\$\$\$\$\$\$
